

COMPANY OVERVIEW

About 2TWENTY

2Twenty Solutions is a specialised cybersecurity company delivering leading-edge technology and strategic security services. Managed by industry-leading technology experts, we partner with organisations to deliver highly effective, efficient, and tailored security strategies. 2Twenty proactively stays ahead of technology trends to identify innovative solutions, understand and master complexities, enabling its customers to concentrate on their core competencies.

OUR FOCUS

■ Assessing Cybersecurity Risks Organisations often lack a realistic, current view of their cybersecurity risks. Without a structured baseline, it is difficult to prioritise or justify security spend to company boards and executives.	■ Managing Compliance Obligations Complying with cybersecurity frameworks places increasing demands on organisations. Navigating compliance without the right expertise leads to gaps, cost overruns, and failed audits.
■ Mitigating Emerging Threats Threats targeting businesses change constantly. Without ongoing monitoring and threat intelligence, organisations remain reactive rather than prepared — responding to incidents instead of preventing them.	■ Simplifying Vendor Selection The cybersecurity vendor market is crowded and is confusing. Organisations struggle to select and deploy the right tools without independent, expert guidance — often investing in solutions that do not match their actual needs.

OUR SERVICES

Consulting We provide strategic cybersecurity guidance for organisations navigating architecture decisions, compliance requirements, and investment in technology. We work alongside your leadership and technical teams to deliver: ▶ Asset Discovery & Assessment: Gaining full visibility into your digital footprint and current risk posture. ▶ Technology Strategy: Aligning your security infrastructure with long-term business goals. ▶ Strategic Security Advisory: Providing expert, independent advice to guide executive decision-making.	Compliance Readiness We guide organisations through the rigorous processes required to meet key industry standards and regulatory audit requirements. Our core areas of expertise include: ▶ ISO 27001 & ISO 42001: Implementing international standards for information security management and AI governance. ▶ ASD’s Essential Eight: Mitigation strategies to protect businesses against cyber threats, tailored to Australian compliance expectations. ▶ National Institute of Standards and Technology: Leveraging NIST’s Cyber Security Framework to build a mature, responsive security posture.	Research & Threat Intelligence Our cybersecurity research and continuous monitoring provide your organisation with early warning of emerging threats, including critical exposure from the dark and deep web. ▶ Dark & Deep Web Monitoring: Actively scanning illicit forums and hidden networks. ▶ Internet Exposure Assessment: Evaluating the vulnerability of your public-facing assets before attackers can exploit them. ▶ Cybersecurity Research & Insights: Delivering actionable intelligence on evolving threat trends targeting your industry.
